

Elements of a Plan

What is the likely result? First-meeting guess:

1. Continuation of effort on funded experiments

SNO (when to exit?)

KamLAND (exit after reactor nu's or go for solar nu's?)

IceCUBE (will funding be maintained?)

2. List of Opportunities

Default list = sum of wishes of NWG individuals

1. Next gen. solar nu det. liquid He (HERON)

2. Next gen. Long Base Line JHF or Fermi Lab

3. Double beta decay

CURORE (in progress)

48Ca LDRD prop. R&D

4. R&D for NuFact

5. Infrastructure for NUSL Low Bkgr Cntg

WHAT ELSE, beyond the default?

3. Justification of opportunities on basis of Science & Scenarios, Competition, Uniqueness of LBNL contribution, Politics, etc.

4. Prioritize (will be hard)

5. Consolidate ? (will be even harder)

Maybe there will be some surprises.
